# About Meir...

Our business is in the distribution of all types of roof waterproofing, to accommodate the ever changing applications of modern construction requirements to contractors, specifiers and merchants nationally. The products include bituminous roofing membranes, asphalt, insulation, single ply, liquid waterproofing, hot melt structural system, green roofs, cladding, slates, lead and a full range of ancillary items.

Our staff are experienced, trained, motivated personnel and focus on providing customers with excellent service, in depth technical support, advice and professional assistance at competitive prices for all requirements, large or small. Supplying customers across the UK from our base in Yorkshire, we are committed to protecting the environment and purchase from renewable sources wherever possible.

## Bitumen Flat Roofing

### Torch-on Membranes

An innovative range of torch-on membranes and systems, designed to satisfy the demands of modern construction by reducing installation time and gas consumption to ensure cost effective solutions for all waterproofing requirements. Available in SBS, APP, APAO and metal faced and are suitable for use on roofs, bridge decks, roof gardens, tanking etc.

### Self-Adhesive

Viapol Line.A is a flame free cold applied high performance, self-adhering roofing system for refurbishment and new building applications. It is a safe and easy to apply alternative to torch applied systems where regulations or circumstances prohibit the use of 'Hot Works,' flame free, at cost effective means. It can be used as part of a system with various underlays.

### Heat Activated Membranes

Techno Phase membranes are designed for use on timber where direct torching to the deck is to be avoided because of a risk of damage or fire. The membranes are available with an aluminium lining and are suitable for existing roofs, primed concrete and metal decks for both new build and refurbishment and carry insurance warranted guarantees.

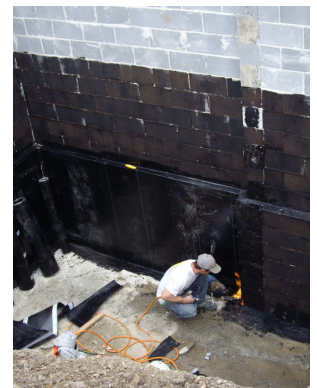

### Antiroot

Evergarden PRV is resistant to chemical and mechanical action of the roots. It is useful in all situations where the membrane is in direct contact with the ground soil such as: roof gardens, underground garages, foundation walls, pools, canalisations and underground tubing, terrace gardens and flower boxes.

### Vertical/Tanking

Guardian membranes combine in one product the best characteristics of a waterproofing layer, adhesion for insulation, drainage and protection properties in tanking systems. This unique combination of characteristics is made possible because of the pattern of dimples on the upper side of the membrane.

Unit C1, M62 Trading Estate, Larsen Road, Goole, East Riding of Yorkshire DN14 6XF

## Lead

### Cast, Milled and Sand Cast Lead

Milled, cast and sand cast lead is available in a variety of thicknesses and widths along with all accessories including motifs, lead slates hoppers, patination oil etc.. One of the most common usages of lead sheet is as a weatherproofing material in the building industry due to lead's high resistance to corrosion.

### Lead Replacements

A range of high performance products that provide low cost flashing as a replacement for traditional lead in flat and pitched roof applications. These products offer the same functionality of lead without the risk of theft.

## Single Ply

### Single Ply

Flame free, cost effective waterproofing options for roofing, particularly in lightweight structures. Manufactured in PVC, TPO and EPDM, they solve the requirements of modern construction.

### PVC

A flame-free, lightweight solution, single-ply roofing options that are a cost-effective means of waterproofing your roof, particularly when the structure has been engineered with a lightweight roof in mind or as an overlay system on an already maximally loaded deck.

## Green Roofs

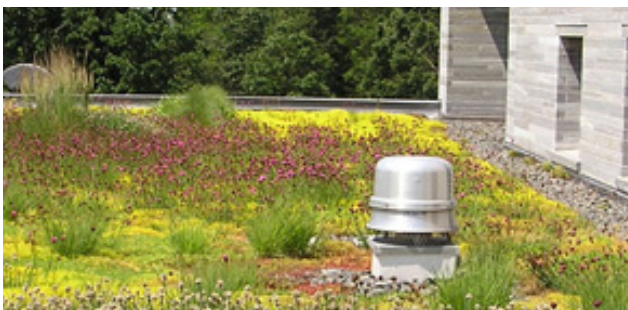

### Green Roofs

A 'green' or 'living' roof is essentially the growing of plants on our rooftops cooling and retaining heat in buildings according to different climates. Intensive, Extensive and Bio-Diverse or Brown roofs create natural growing conditions across the roof from a thin growing layer of sedums and mosses to plants, trees, shrubs, water features and even golf courses. The vegetation has numerous advantages such as insulation, habitat for wild life, rainwater control, noise control and many more.

### Extensive

Lightweight, low cost and maintenance, drought tolerant roofs planted with sedums, grasses, mosses and meadow flowers that require little irrigation or fertilisation to insulate buildings, reduce noise and rainwater runoff whilst providing a habitat for wildlife.

### Bio-Diverse or Brown Roofs

Providing habitat and food that supports local and rare species of plants, animals and invertebrates often missing from redevelopment and helps partly mitigate the loss of habitat by covering the flat roofs with a layer of locally sourced material and vegetation which allows nature to re-colonise these spaces that are under threat.

### Intensive

Can be thought of as a Garden on a roof with lots of shrubs, flowers and even trees along with walkways and flowerbeds, it is heavier and needs more support and is more expensive. Deeper growing medium can sustain complex landscapes, including small trees and even small ornamental ponds and fountains.

Unit C1, M62 Trading Estate, Larsen Road, Goole, East Riding of Yorkshire DN14 6XF

## GRC Promenade, Walkway Tiles & Slabs

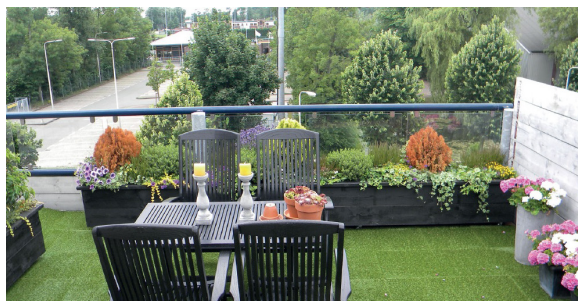

### Porcelain

Castle Porcelain Stoneware are slabs 600 x 600 x 20mm thick, that are strong, yet lightweight, that create a luxurious and aesthetically pleasing surface. Complete with a range of edges, corners and trims to accommodate most applications.

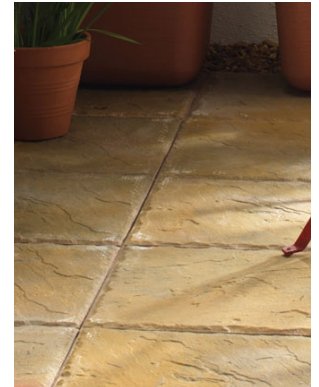

### Grassflex

Grassflex tiles are manufactured with a recycled rubber granulate base that is soft and safe for use on waterproofing membranes. Grassflex tiles are also manufactured with drainage channels on the underside. As the tiles are water permeable up to 250mm per hour (EN 1176) they allow rain water to flow through the tiles and off the waterproofing through the drainage channels on the underside

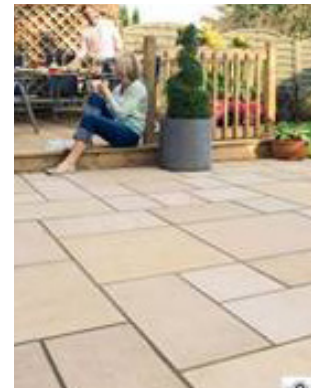

### Promenade Tiles

Promenade tiles high strength granite, cement and glass fibre in a choice of sizes, textures and colours allow a wide variety of effects to be achieved to enhance roofs, patios, balconies and other level areas.

### Promenade Slabs

Easy installation, reduced labour and equipment cost, providing protection to waterproofing membranes, the system protects from mechanical damage, ultra violet light degradation and temperature extremes, with adequate drainage preventing the build-up of surface water and reduce the likelihood of plant growth to enhance roofs, patios, balconies and other level areas.

### Pave Pads

Slab supports reduce the impact of loads, are self-draining, easy and quick to lay a fully levelled paved or timber deck surface on most types of flat roofs or balcony surfaces. Supplied in differing heights, stackable or adjustable to counteract the roof fall and obtain a level surface to the slabs or decking.

## Liquid Waterproofing Systems

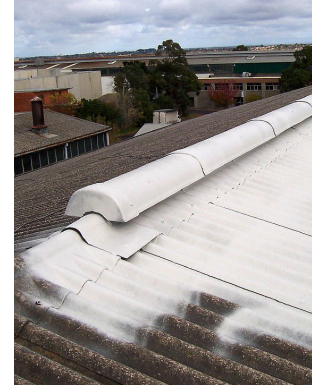

### Roofing Systems

Cold applied, rapid curing, easy to apply liquid waterproofing coating systems for flat or pitched roofs, cladding and encapsulation offering the latest innovations in waterproofing and protective coatings.

### Asbestos Encapsulation

A range of liquid applied Asbestos Encapsulation coatings offering up to a 20 year guarantee. Specialist cleaning systems are available to meet HSE regulations.

### Metal & Plastisol Cladding Coating

Liquid coating for waterproofing and refurbishing metal and Plastisol coated cladding in a choice of colours with guarantees up to 20 years.

### Balcony Coating

Easy to apply non-slip, liquid waterproofing traffic coating for balconies, stairs, railway platforms that is available in a choice of colours.

### CEC - Cote Cutting Edge Corrosion

Rapid curing easy to apply refurbishment coating for corroded ends of metal sheets.

**Unit C1, M62 Trading Estate, Larsen Road, Goole, East Riding of Yorkshire DN14 6XF**

## Liquid Waterproofing Systems

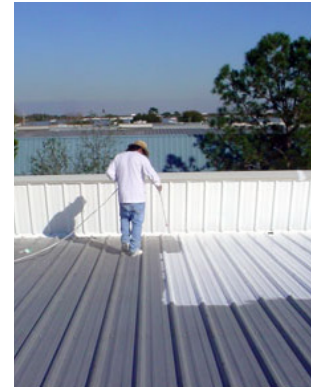

### Rooflight & Roofwindows

Shatterproof repair and coating system for glass and polycarbonate roof lights.

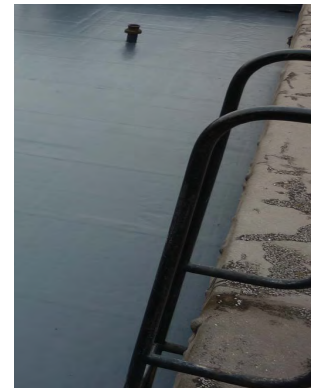

### Acrylic Coating

Liquid coating that is moisture tolerant, cold applied and reinforced with fibres to waterproof damaged or leaking roofs and gutters.

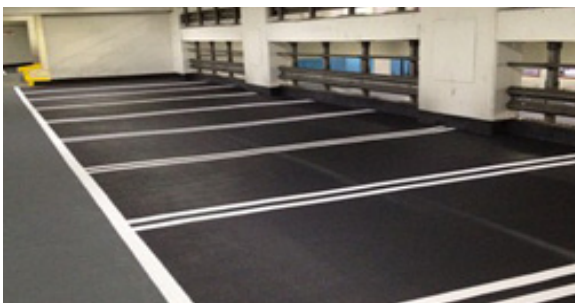

### Single Ply Overlay

A fast drying liquid coating for synthetic single ply that avoids stripping up and prevents further degradation.

### Car Park Coatings

A range of products designed to provide cost effective solutions to clients, specifiers and contractors for car parks, truck turning areas, railway platforms, balconies etc.

### Guttercote

Rapid curing liquid coating applied wet on wet onto rusty gutters with up to 15 year guarantees.

**Unit C1, M62 Trading Estate, Larsen Road, Goole, East Riding of Yorkshire DN14 6XF**  
**Tel: 01405 780444 / 01752 559036 Fax: 01405 780445**

## Liquid Rubber

### Liquid Rubber

Requiring no primer or fleeces, easy to apply fully bonded, seamless monolithic waterproofing coating with excellent elasticity, high puncture and movement resistance, that eliminates the need for stripping existing waterproofing on most roof surfaces.

### Rapid Roof System

A cold applied liquid, two coat MMA based seamless waterproofing system that can be brush or roller applied down to minus 30 degrees C, cures within 20 minutes, can be trafficked within 30 minutes to provide a fully bonded, tough surface and 200% elasticity. With a smooth or anti-skid finish, available in seven standard colours (or any RAL colour on request).

### Guttertape

A strong, self-adhesive tape designed to provide a quick and immediate, cold applied solution to waterproofing problematic gutters.

## GRP Resin Waterproofing

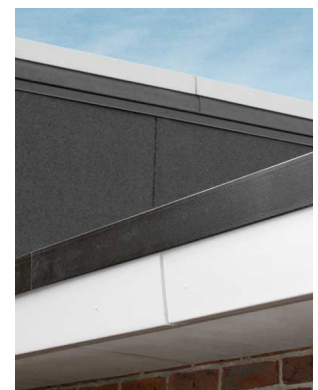

### GRP Resin Waterproofing

GRP (Glass Reinforced Plastic - Fibreglass) is cold applied on site to give a seamless, non slip, trafficable and flexible, waterproofing system that is heat and frost resistant, to provide a cost effective long life solution for both domestic and commercial roofing requirements without the use of naked flames.

### GRP Trims

Pre-formed GRP flat roof trims manufactured to provide a secure clean, professional finish to all detail areas.

Unit C1, M62 Trading Estate, Larsen Road, Goole, East Riding of Yorkshire DN14 6XF

## Insulation

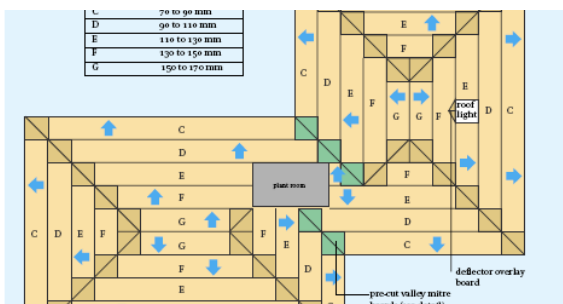

### Extruded Polystyrene

Environmentally friendly, recyclable, easy to handle and lightweight, flame retardant, has a high compressive strength, unaffected and resistant to moisture, versatile, easy to cut and shape and ideal for use in floors, walls and inverted roof applications to reduce thermal stress and save heating and cooling energy.

### Tapered/Cut to Falls

Tapered/cut to falls schemes provide an adequate slope for the removal of water and reduce ponding, whilst satisfying current thermal regulations structures are lighter and eliminates the weight and slow drying associated with sand and cement screeds, are quicker and easier and less costly to install.

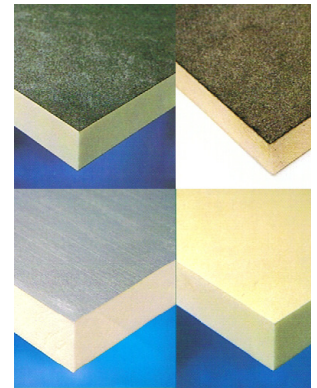

### Expanded Polystyrene

Easy to handle and cut, rot proof, with long term durability, uniform thickness and in cut to falls systems, square or tongued and grooved edge detail. Available in various grades including high density for use on balconies etc., it has factory bonded facings for use with bitumen, single ply, mastic asphalt and liquid waterproofing.

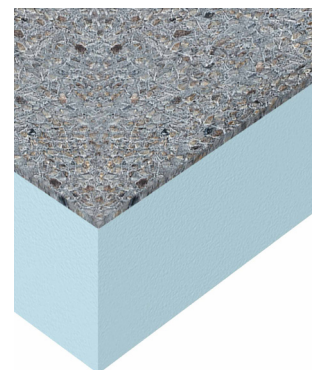

### PUR/PIR Polyurethane

Resistant to the passage of water vapour, easy to handle and install, can be fully or partially bonded or mechanically fixed to provide cost effective, environmentally friendly insulation for most waterproofing systems for new build or refurbishment.

### Concrete Topped

Environmentally friendly, interlocking extruded polystyrene cement topped board creates a lightweight protected roof with a high compressive strength, good thermal and fire performance, resistance to wind uplift and is safe and easy to install combined with reduced dead loading, suitable for intermittent traffic whilst protecting the waterproofing.

## Rubber Tiles

### Walkway

An environmentally friendly way of protecting your roof, that works in conjunction with the existing roof covering to provide a porous surface that assists in the control of drainage and prevents "surge" blockages in the drainage system. Significantly lower in weight than concrete products which reduces the stress on the roof, makes handling easier and can incorporate reflective markings to define walkways and no go areas.

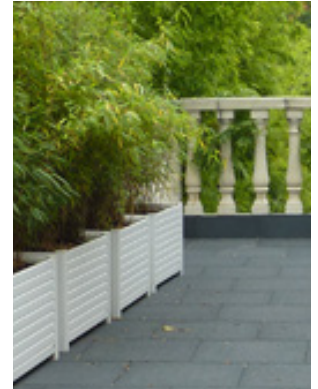

### Playground

Full range of play mats provide general protection on low-level apparatus, a hard wearing, safe, non-slip, low maintenance safety surface for play areas that allows water to drain away freely. They can have colourful designs that can be laid under and around play equipment or to cover flat roof areas in order to provide additional space for leisure relaxation.

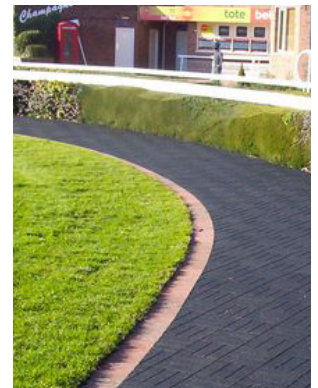

### Balcony

Rubber balcony and walkway paving tiles that are anti-slip, shock resistant, anti-vibration, safe and attractive alternative to conventional concrete paving to reduce the risk of injury from accidental falls, are available in a range of thicknesses and colour options.

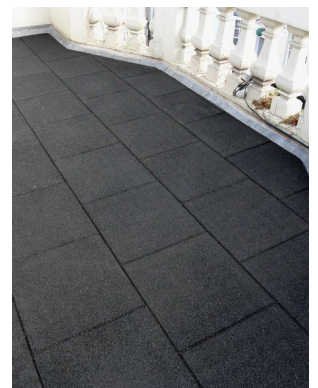

### Equestrian

Available with plain or brick effect surfaces these paving tiles offer an attractive alternative to conventional concrete paving, are quiet and durable, reduce the risk of injury from accidental falls and are available in a range of thicknesses and colour options.

### Castleflex

Castleflex Interlocking Rubber Promenade tiles are manufactured from recycled SBR and are available in 500 x 500mm size. Castleflex tiles can be used on balconies, flat roofs, walkways and many other applications.

## Profiled Sheeting & Roof Lights

### Eco-Panel Insulated Sheet

Insulated panels for pitched roofs and walls provide a cost effective, high insulation value, lightweight, quick and easy to install solution for new, refurbishment and renovated buildings in construction and agriculture. Available in lengths from 4 to 7 metres with 1 metre cover.

### Roof Lights

Rooflights supply natural daylight and reduce the need for artificial light whilst saving energy and reducing the carbon footprint of any industrial building. The range includes GRP and polycarbonate to match any metal roofing and cladding system in single skin installation or as insulating composite panels.

### Fibre Cement

A flexible roofing and cladding product, light weight, fire resistant, resistant to mould or rot damage, does not rust, easy to transport, faster to install offering a cost effective waterproofing solution for use on industrial, agricultural and domestic buildings.

### Profile Sheeting

Box profiled metal cladding and roofing sheets can be Plastisol, Polyester coated or galvanised 0.5 or 0.7 metal 1 metre cover manufactured cut-to-length in a variety of colours for garage roofs, agricultural and industrial buildings.

### Tile Effect Sheets

Lightweight, durable, simple to install and available in a wide range of colours, ideal for over-roofing or flat to pitched roof conversions. With a pleasing and attractive appearance it is ideal for many applications including schools, public buildings, stables, chalets etc.

**Unit C1, M62 Trading Estate, Larsen Road, Goole, East Riding of Yorkshire DN14 6XF**

## Pitched Roofing

### Breather Membranes

Providing a secondary barrier to the ingress of rain, wind and snow in pitched roofs the breather membrane is a water vapour permeable film between two layers of nonwoven polypropylene, forming a flexible roof tile underlay. With a BBA for use in warm non-ventilated and cold ventilated pitched roof systems it is suitable for unsupported and fully supported specifications

### Roof Windows & Skylights

Double glazed, fully opening windows and skylights maximise living comfort, easy access, offer unobscured views and easy operation whilst providing light and life to otherwise unusable spaces.

### Natural Slates

A wide range of slate from various parts of the world are produced to the very highest standard and selected for quality, consistency and cost effectiveness. The quarries are from Spain, Brazil, North America, China and the UK.

## Sundries

### Sundries & Tools

A whole range of accessories including tools, fixings, flashings, adhesives to fix, finish and enhance roofing products.
