

RESITRIX®

RESITRIX® is an all-purpose, extremely durable and easy-to-install, single-ply waterproofing membrane with an EDPM surface layer. The material properties of the whole RESITRIX® range, guarantee ultimate efficiency and excellent welding characteristics, which are significantly reducing the number of workers and time needed for any roofing project.

SR / Grey for Light Coloured Roofs

RESITRIX® SR is a light grey coloured, self-adhesive, hot-air weldable EPDM waterproofing membrane. Due to the grey colour, RESITRIX®SR offers new aesthetic design options and additionally has solar reflective properties.

RESITRIX® SK W FULL BOND is a fully self-adhesive and root resistant heat-weldable EPDM waterproofing membrane, which carries FLL root safe certification. RESITRIX® SK W Full Bond can be installed in a variety of applications, either fully exposed or beneath roof gardens and living roof systems.

ALUTRIX® 600 is a self-adhesive vapour barrier. It is suitable for all internal conditions, including very high humidity. This vapour barrier consists of a reinforced composite aluminium foil with a tenacious self-adhesive backing and removable release film.

MB / Mechanically Fixed

RESITRIX® MB is a heat-weldable EPDM waterproofing membrane especially used for mechanically fixed applications. RESITRIX® MB complies fully with all requirements of FM Approval Standard Class No. 4470

CL / Preferably for PU-Adhesion

RESITRIX® CL is the classic EPDM waterproofing membrane for hot and cold bonding applications, preferably for PU-adhesion. For decades, it has consistently proven itself in practice, on tens of thousands of flat roofs.
